The Department has well qualified and dedicated faculty members to cater the need of budding engineers.

## **ABOUT THE WORKSHOP**

This workshop offers a platform for the participants to get an exposure in nanotechnology.

After more than 20 years of basic nanoscience research, applications of nanotechnology are delivering in both expected and unexpected ways on nanotechnology's promise to benefit society.

Nanotechnology is helping to considerably improve, even revolutionize many technology and industry sectors like information technology, energy, environmental science, medicine, homeland security, food safety and transportation etc. Using nanotechnology, materials can effectively be made to be stronger, lighter, more durable, more reactive or better electrical conductors.

Science and technology are rapidly gaining competence at the nanometer scale. Most of the technology will be 'nanotechnology' by 2020s. In other words, before 2030, most fields of technology will make routine use of nanometer-scale components.
